### **Mazda Diesel engine - Wikipedia**

The inline-four engine or straight-four engine is a type of inline internal combustion four-cylinder engine with all four cylinders mounted in a straight line, or plane along the crankcase. The single bank of cylinders may be oriented in either a vertical or an inclined plane with all the pistons driving a common crankshaft. Where it is inclined, it is sometimes called a slant-four.

In theory, diesel engines and gasoline engines are quite similar. They are both internal combustion engines designed to convert the chemical energy available in fuel into mechanical energy. This mechanical energy moves pistons up and down inside cylinders. The pistons are connected to a crankshaft, and the up-and-down motion of the pistons, known as linear motion, creates the rotary motion ...

1824 Sadi Carnot published his theory on the thermodynamic cycle of the heat engine. From it, Rudolph Diesel would design his engine. 1825 'Curacao' built in Dover, England, becomes the first practical steamship to sail. It is bought by the Netherlands Navy. It is a wooden hull, 445 tonnes, paddle-wheeler with two engines developing 75 kW. 1827 Machinefabriek Werkspoor is founded, in Amsterdam.

Abstract: Exhaust gas recirculation (EGR) is an effective strategy to control NOx emissions from diesel engines. The EGR reduces NOx through lowering the oxygen concentration in the combustion chamber, as well as through heat absorption. Several configurations have been proposed, including high- and low-pressure loop EGR, as well as hybrid systems.

But, that can get even much worse - if it is discovered in the process that the original Failed Head Gasket problem might actually be a CRACKED ENGINE BLOCK problem - which is a condition that Head Gaskets Replacement (even ENGINE HEADS Replacement) will NOT fix!

1. Introduction. In heavy-duty diesel engine development there is a large focus on decreasing fuel consumption and CO<sub>2</sub> emissions. One part of this focus can be accomplished by minimizing the frictional losses of the engine.

I have worked with all of these except the for the Rankine turbine and thermionic generators. All engines have advantages and disadvantages. For use with my heliostats I have chosen either the Steam Rankine piston engine or the Rankine rotary expansion engine using propane as the working fluid.

Understanding water damage. If the water is from an external source such as rain, and it came into the air cleaner via the butterfly stud on the air cleaner, chances are there is only a small quantity in only a few of the engine bores.
