RTS Solutions is a specialist transportation software engineering company delivering stable and resilient, web-based, real-time safety critical applications.

## **RTS Solutions - An Introduction**

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Dependability, or reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or ...

To get ahead of safety and process risks and win the productivity race, you need decision-support information solutions that give you trusted data from multiple sources and content types, provide you with analytical and calculation tools, integrate with engineering software and the rest of your digital toolkit and give you continuous access - even when you're away from your desk.

1 The very fact that there is such large variance in these estimates tells you something about software engineering as a discipline, but see, e.g., for more details.. 2 For our purposes, reliability is "The probability that [a system] will perform a required function without failure under stated conditions for a stated period of time," following the definition in .

Contract Solutions can now offer high quality multi axis turning with the introduction of a new Mori Seiki NLX 2500/700. This allows us to produce complex turned parts from 2mm - 300mm diameter and 700mm in length in a variety of materials from plastic to high temp alloys, to suit our customer needs.

Multi-objective formulations are realistic models for many complex engineering optimization problems. In many real-life problems, objectives under consideration conflict with each other, and optimizing a particular solution with respect to a single objective can result in unacceptable results with respect to the other objectives.
